Education

Northeastern University, Boston, MA

Khoury College of Computer Science

Candidate for Bachelor of Science in Computer Science

- GPA: 3.4/4.0
- Relevant Coursework: Calculus 1 for Sci/Engr, Discrete Structures, Introduction to Mathematical Reasoning, Mathematics of Data Models, Algorithms & Data, Object-Oriented Design, User Experience Design, Web Development, Mobile Application Development, Foundations of Cybersecurity, Computer Systems, Foundations of Data Science, Introduction to Databases, Principles of Human-Computer Interaction

September 2023 - Present
Expected Graduation May 2027

TECHNICAL KNOWLEDGE

Languages:	Java, Kotlin, HTML, JavaScript, CSS, Swift, C, SQL, Python
Operating Systems:	Windows, MacOS, Apple IOS
Tools:	GitHub, React.js, React Native, Node.js, Netlify, Render, Expo, Xcode, Figma, Unity, MongoDB, WordPress, MS Office 365, MS Excel Unit Testing, VSCode, IntelliJ

EXPERIENCE

Northeastern University - Federal Research Project, Boston, MA

July 2026 - Dec 2026

Geospatial Analyst & Web Application Developer

- Develop full-stack data analysis web applications for federally funded strategic research, building robust data pipelines and interactive web applications using Python, JavaScript, and SQL
- Built Python-based geospatial data pipelines using satellite imagery (SAR and optical) and cloud-based geospatial platforms to detect physical infrastructure change over time
- Designed and implemented a computer-vision detection algorithm (adaptive thresholding, connected-component analysis) to generate time-series activity metrics for cross-validation against independent data sources

Northeastern University's Sustainability Incubator, Boston, MA

Jan 2025 - August 2025

Full-Stack Web Developer & Technical Research Assistant

- Designed websites and optimized interactive data visualizations and dashboards using tools such as Tableau, React.js, and WordPress to showcase Northeastern's sustainability initiatives, enabling intuitive exploration of progress and impact
- Leveraged MS Excel and AI models, such as BERT, to analyze sustainability-related data and assess patterns of sustainable versus non-sustainable practices
- Enhanced dashboard functionality with dynamic features, including customizable filters, search options, and automated reporting capabilities, aligned with rankings requirements and stakeholder needs
- Provided project management support for the Sustainability Innovation Living Lab and spreading sustainability awareness through Outlook, coordinating cross-disciplinary research efforts and innovative sustainability demonstrations across the campus

Gameheads, Oakland, CA

Feb 2024 - June 2025

Game Developer

- Developed a [2D musical puzzle platformer](#) using Unity with a focus on atmospheric storytelling and minimalist visuals, where players control a whole note, solving music-themed puzzles to progress through levels
- Showcased game at Gameheads' 10th annual video-game showcase to professional game developers from game industry companies

PROJECTS

[Curve](#)

Mar 2024 - Aug 2024

Frontend Developer & Designer

- Developed an AI-powered application using [Figma](#), React Native, LangChain, and Expo that personalizes learning by generating a custom plan for users including tailored assessment questions, a condensed "textbook" of essential information, and step-by-step practice exercises to help users master new skills efficiently
- Gave a sales pitch to a judge panel and won 1st place at Northeastern University's hackathon, [PawHacks](#)

[CamRa](#)

Mar 2024 - Dec 2024

Frontend Developer

- Deployed an online video calling platform exclusively for college students and garnered thousands of views by promoting the site on [Instagram](#) and other social platforms, fostering a secure and engaging environment for virtual interactions
- Designed the website and responsible for its entire frontend using React.js, creating a user-friendly and visually appealing interface
- Gave a sales pitch to a judge panel at Northeastern University's Husky Startup Challenge and was awarded funding by Northeastern University for project "CamRa," enabling further development, marketing, and getting more users

[Flow Fitness](#)

June 2024 - August 2024

Frontend Designer

- As a part of the User Experience Design course, worked closely with professionals to rework FlowFitness's website, improving both the user interface and user experience for a more seamless sign-in process
- Developed a mobile app and website prototype in [Figma](#) that incorporates these design changes and many other new features, enhancing overall usability and gym experience for potential users
